Technical contact

Name: Person or role name

Email address: Should be generic/role address, not personal

Telephone number:

Support Contact

Role name: e.g. "Help Desk"

Email address: Should be generic/role address, not personal

Telephone number:

In signing this registration request form, the Organisation named above confirms that it:

1. has reviewed the eduroam National Policy for South Africa (available at <https://eduroam.ac.za/policy/>) and agrees to be bound by this policy and to configure its eduroam service(s) in accordance with its requirements, informed by prevailing best practices.
2. acknowledges that the eduroam wordmark and the eduroam logo are registered trademarks in South Africa and in other countries, and may only be used to describe services that comply with eduroam's policies and service description. Should the Organisation no longer be able to comply, it agrees to cease use of the eduroam trademarks (including as an SSID) without delay.
3. understands that its technical contact(s) will be subscribed to one or more mailing lists for sharing operational information about the eduroam service, including security information; and that the contact details provided may be shared with the global eduroam operations team and other eduroam roaming operators and providers to facilitate support, debugging, and incident response, as detailed in the privacy statement published on the eduroam.ac.za website.
4. understands that its participation in eduroam constitutes the provision of a Service as contemplated in TENET's REN Master Service Agreement (whether signed directly or incorporated by reference as general terms and conditions, mutatis mutandis). This application serves as the Service Order Form contemplated therein, and binds the organisation to those conditions of contract.
5. acknowledges that choosing to participate as an identity provider will incur costs based on the number of full-time equivalent staff and students (FTEs) at the institution, as outlined on the eduroam.ac.za website.
6. understands that there is no common global consensus on what constitutes a minor child, nor on the protections that may be required. eduroam service providers, therefore, cannot be expected to implement child-protection measures for minor users. As such, should it act as an identity provider and assert the identity of a minor on eduroam, the Organisation accepts full responsibility for ensuring that all applicable obligations for their protection are met, regardless of which service provider they may connect through.
